

C: 
$$\begin{cases} \frac{x}{6} + \frac{y}{4} = 1 & (\text{retu } s) \\ y - 1 = x - 2 & (\text{retu } r) \end{cases}$$
  $\begin{cases} \frac{x}{6} + \frac{y}{4} = 1 \\ y = x - 2 + 1 \end{cases}$   $\begin{cases} \frac{x}{6} + \frac{y}{4} = 1 \\ y = x - 2 + 1 \end{cases}$  Dai, substituted of y due eq. de r no y da eq. de s, temps: 
$$\frac{x}{6} + \frac{(x-1)}{4} = 1 \qquad \frac{24}{6} \qquad \frac{24x}{6} + \frac{24(x-1)}{4} = 24 \implies 4x + 6(x-1) = 24$$

=> 4x+6x-6=24 => 10x=24+6 ⇒ 10x=30 :. ×=3

Como, y= x-1, etao Y= 3-1=2: Y= 2

Dar, (13,2)

$$= \frac{|\Delta I|}{a} = \frac{15/a}{a} = \frac{5/a}{a}$$

$$= \frac{5}{a} \cdot \frac{1}{a} = \frac{5}{4}$$
